

The Roadmap to Modernization: Take the Next Steps with Siemens

It's time to take the next step toward modernizing your automation systems. The benefits of modernization are clear:

- Improved ROI
- Higher Productivity
- Stronger Security
- Enhanced Safety
- Greater Transparency

Why modernize now?

Select **early-lifecycle components** before spares and support for your current parts become overpriced or unavailable. Siemens TIA Portal can reduce engineering time by up to

+30%¹

Why modernize with Siemens?

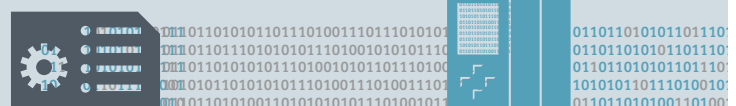

- 1** Get **integrated safety, security and no-programming diagnostics** for greater transparency and proactive maintenance. Reactive maintenance can cost

50% more than planned maintenance.²

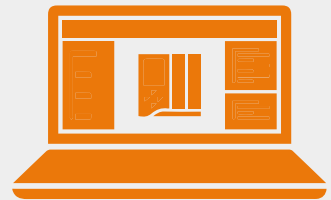

- 2** Get **no-charge code conversion services**. Retain your current structures and naming conventions, eliminating the need for additional training and leading to

zero hassle.

- 3** Get a **single engineering framework** that integrates controllers, distributed I/O, HMI, drives, motion control and motor management. Engineers have reported up to a

30% reduction in design time for new production systems with these tools.³

- 4** Get **basic technical support and a global network of specialists** to provide the assistance you need at

zero cost.

Siemens is active in **190 countries** and has an extensive channel and solution partner network.

Are you ready to take the next step toward a future-focused, digitally optimized automation system?
