HMI Panel Replacement

Easy-to-configure, cost-effective HMI Panels offering superior performance and direct communication on 3rd party networks.
Is it time to change or rethink your panel strategy?

**Siemens offers easy-to-configure, cost-effective HMI Panels offering superior performance and direct communication on 3rd party networks**

<table>
<thead>
<tr>
<th>Challenges</th>
<th>How Siemens can help</th>
</tr>
</thead>
</table>
| I need a panel that will offer cost savings while reducing engineering effort and minimizing downtime. | **Siemens HMI Panels** offer cost savings by allowing you to **standardize, regardless of your controller**, due to the **built in communication drivers with direct network connectivity** to PROFINET, EtherNet/IP™, Modbus™ TCP/IP, and other Ethernet communications protocols.  
As your business grows, our **scalable** HMI Panel family reduces engineering effort, due to our **single programming software** that allows you to easily switch panel size with **auto scale functionality** to meet your every demand.  
Siemens HMI Panels have **automatic back-up** for the O/S, application and device settings on an SD card, protecting your information. In the unfortunate event you experience damage, transfer of the SD card to the new panel allows for **fast device replacement** to quickly get the system back up and running. |
| I need to have access to the existing data in the new HMI project.        | **SIMATIC WinCC TagConverter** allows 3rd party PLC tags to be easily imported into our software, **saving you engineering time and preserving your data**.  
See page #6 for more details.                                                                                                                                                                                                                                                          |
| I need more advanced hardware and software capabilities at a competitive price. | **Siemens cost-effective** HMI Panels offer many innovative features, including **pop-up windows, slide-in windows, camera control, a 2nd Ethernet port, industrial styles/designs/controls**...and much more! See next pages for more details.                                                                                           |
Why choose Siemens HMI Panels?

### Siemens HMI Panel Family “Best-in-Class” Features: Hardware

- **Protocols** that are easily configurable and supports direct communication to current and legacy controllers: [Allen-Bradley®](#), Mitsubishi, OMRON, Modicon and OPC UA Client/Server.
- **Rugged design**, including *aluminum front casing* that meets *vibration* and *chemical resistance* for *harsh environments*. Outdoor panels for *extreme ambient conditions* (IP65) and wash-down panels (IP66k) for *hygienic environments*.
- **Photo-realistic images**, optimal readability and a detailed process display due to:
  - *High resolution* 16 million colors
  - *170° viewing angle* (vertical/horizontal)
- **Backlights** reduce *energy cost* due to lower consumption and longer lifespan:
  - Up to 80,000 hr backlights (last at least 60% longer than standard industrial 50,000 hr backlights)
  - 0-100% dimmable backlights to preserve backlight and/or prevent retina burn in dark environments
- **PROFIBUS and PROFINET interface** for low-cost connection of distributed field devices or couplings
- **Audio out – audio port** allows you to play maintenance announcements for further instructions and alarms for notifications
- **10/100/1000 Mbps Ethernet port** supports *Gigabit transfer speeds* and allows *network segmentation* at the HMI Panel

### Siemens HMI Panel Family “Best-in-Class” Features: Software

- **A single, intuitive** SIMATIC WinCC programming software tool across the entire HMI Panel family for easy configuration and reduced engineering time!
  - Comprehensive *library concept* for user-definable objects and faceplates
  - Intelligent tools for *graphical configuration* and *mass data handling*
  - Expanded service concepts with *remote operation*, *diagnostics* and administration over Ethernet, including email communication
  - *Scalable runtime functionality*, from the Basic Panel to distributed SCADA applications
  - *Innovative configuration interface* based on the latest software technologies
  - *No additional cost for a driver* to allow Siemens HMI panels to communicate with 3rd party controllers

*Options not available on all models*

HMI Panel replacement made easy with SIMATIC WinCC TagConverter

SIMATIC WinCC TagConverter allows 3rd party PLC tags to be easily imported into our WinCC programming software, saving you engineering time and preserving your data.

- Schneider Electric®/ Modicon® ProWORX, Concept, Unity Pro XL
- Allen-Bradley® RSC-5®, SLC™ 500, and ControlLogix®
- Converts
  - Counter
  - Timer
  - Alias Tags
  - Multi-dimensional arrays
  - UDTs
- Converted file ready to import into WinCC
- Tags/symbols

To download the tool, please visit:

Global carpet manufacturer switched to Siemens HMI Panels, while retaining non-Siemens controllers and realized the following benefits:

- Reduced costs due to standardization on Siemens HMI Panels while maintaining current controller base
- Reduced engineering time and preservation of data by not having to recreate tags through the use of the Siemens WinCC TagConverter
- Increased productivity due to remote connectivity functions via application web pages
- Maintain costs while benefiting from more advanced, innovative HMI feature

Siemens HMI Panels are just one of many innovative solutions we offer, from the field level through to the enterprise level, to help you improved productivity, efficiency and connectivity. Whether you’re replacing components in an existing system or investing in a future-focused complete solution, Siemens has the technology, expertise and support to customize a solution that can transform your organization into a Digital Enterprise.

**Totally Integrated Automation (TIA)**

TIA is an open system architecture that covers the entire production process and offers maximum interoperability across all automation components. This is accomplished by the following shared characteristics: consistent data management, global standards, and uniform hardware and software interfaces — which minimize engineering time, reduce costs and boost flexibility.

TIA optimizes the entire manufacturing process, leading to increased ROI by:

- Improving engineering efficiency for lower design costs
- Minimizing downtime by applying integrated diagnostic functions
- Boosting production flexibility through the use of integrated communication tools
- Enhancing plant and network security through integrated security functions
- Improving safety with technologies that protect personnel, machinery and the environment
- Optimizing data quality with a single, streamlined database
- Improving access to data for smarter decisions
- Simplifying implementation of automation solutions with global standards
- Improving overall performance through the interoperability of system-tested components

**Totally Integrated Automation (TIA) Portal**

The key to unlocking the full potential of TIA is our TIA Portal — a single engineering framework that seamlessly integrates controllers, distributed I/O, HMI, drives, motion control and motor management — allowing you to **reduce your engineering time by up to 30%**.

Significant TIA Portal features and benefits that enable you to **reduce your engineering time while increasing your level of transparency and diagnostics** include:

- Integrated “no-programming” system diagnostics, automatically generated during device configuration
- One common tag database for fewer mistakes
- Ability to create custom libraries to be shared across your corporate servers for easy creation of company standardization for projects
- An overall project management tool that allows for complete system (multiple controllers, HMIs, networks, etc.) to be programmed, monitored, saved and stored all in one software package
- Easy-to-use, intuitive system functions, such as implementation wizards and drag and drop between editors, for fewer clicks and faster engineering
- Additional time-saving functions, such as online/offline comparisons, pictorial system view with online diagnostics, no-PC-required trace functions and the ability to make code modifications while in “run” state without stopping the PLC

**How did we calculate the 30% TIA Portal savings?**

We interviewed actual Siemens customers who implemented our TIA Portal engineering framework and asked them to share their success stories. Read their stories and watch the videos at: usa siemens com/tia-portal-references

For manufacturers that want to upgrade individual products, Siemens offers a comprehensive, competitively priced automation portfolio that can be used in your existing system to enhance performance, offering:

• Ease of integration with existing assets
• Easy-to-configure hardware and software
• Resolution of maturity/obsolescence issues by replacing legacy components with state-of-the-art technology
• Innovative features to support flexibility and competitiveness
• Flexibility to support various network protocols, including PROFINET and EtherNet/IP

For more information on our products, see pages 10 and 11.

Support

Support and Consulting Services

• Industry Online Support site is your esource for comprehensive information, FAQs and application examples covering all products, systems and services in the fields of automation and drives, as well as for the process industry. Support requests may also be initiated and tracked on this site.

• Technical and Engineering Support specialists provide 24/7 advice and answers for all inquiries about functionality, handling, and fault clearance of Siemens industrial products and solutions — via phone, email, support request, and remote access. Services also cover obsolete and discontinued products.

• Regional Application Engineers provide local assistance.

• Experienced global network of Certified Solution Partners with extensive industry knowledge using Siemens components for the implementation of tailored solutions for your specific applications and timetable.

• Global support available in 190 countries. Standardized global part numbers and ease of communication in your preferred language.

Training Services

We help you to assess, define, implement and manage a workforce improvement program that is customized to your exact learning needs. Courses include product, safety and certification learning programs delivered the way you want them — in-person, virtual instructor-led or using our digital environment.
