The RUGGEDCOM RSG2300 from Siemens is a utility grade, fully managed modular Ethernet switch, featuring 32 total ports, with 24 10/100TX Copper ports, up to 8 100FX Fiber Fast Ethernet ports, and up to 4 1000LX Gigabit Ethernet ports. The RSG2300 features 2-port modules for superior flexibility, support for multiple fiber types, and long haul optics, giving it high density port capabilities with cost effective gigabit Ethernet port speeds.

Designed to operate reliably in harsh environments, the RSG2300 provides a high level of immunity to electromagnetic interference and heavy electrical surges typical of environments found in utility substations, rail applications, and oil and gas operations. An operating temperature range of -40°C to +85°C coupled with hazardous location compliance (Class 1 Division 2), optional conformal coating and a galvanized 1U form factor steel enclosure with industrial grade DIN, panel, or 19" rack-mounting options allows the RSG2300 to be placed in almost any location.

The RSG2300's modular flexibility offers 10BaseFL /100BaseFX/1000BaseX fiber and 10/100/1000BaseTX copper port combinations. Optional front or rear mount connectors make the RSG2300 highly versatile for any application and can support multiple fiber connectors (ST, MTRJ, LC, SC) without loss of port density.

The embedded Rugged Operating System (ROS) provides advanced cyber security features and comprehensive networking functions such as Enhanced Rapid Spanning Tree (eRSTP), Port Rate Limiting, and a full array of intelligent functionality for high network availability and manageability. Coupled with ruggedness and durability that is designed in from the onset, the RSG2300 is ideal for creating mission critical, real-time, control applications where high reliability and availability is of paramount importance.

All RUGGEDCOM products are backed by a five year warranty and unsurpassed technical support.
Features and Benefits

**Ethernet Ports**
- 24 10/100TX copper ports
- Optional: up to 4 1000LX Gigabit Ethernet ports (copper and/or fiber) and up to 8 100FX Fiber Fast Ethernet ports
- 2 port modules for tremendous flexibility
- Supports many types of fiber (Multimode, singlemode, bi-directional single strand)
- Long haul optics allow distances up to 90km
- Multiple connector types (ST, MTRJ, LC, SC)

**Cyber Security**
- Multi-level user passwords
- SSH/SSL/SFTP (128-bit encryption)
- Enable/disable ports, MAC based port security
- Port based network access control (802.1x)
- VLAN (802.1Q) to segregate and secure network traffic
- RADIUS centralized password management
- SNMPv3 authentication and 56-bit encryption

**Rugged Operating System (ROS) Features**
- Simple plug and play operation - automatic learning, negotiation, and crossover detection
- MSTP 802.1Q-2005 (formerly 802.1s)
- RSTP (802.1w) and Enhanced Rapid Spanning Tree (eRSTP) network fault recovery (<5ms)
- Quality of Service (802.1p) for real-time traffic
- VLAN (802.1Q) with double tagging and GVRP support
- Link aggregation (802.3ad)
- IGMP Snooping for multicast filtering
- Port Rate Limiting and Broadcast Storm Limiting
- Industrial automation features (eg. Modbus)

**Management Tools**
- Web-based, Telnet /SSH, CLI management interfaces
- SNMP v1/v2/v3 (56-bit encryption)
- Remote Monitoring (RMON)
- Rich set of diagnostics with logging and alarms

**Universal Power Supply Options**
- Fully integrated, dual-redundant (optional) power supplies
- Universal high voltage range: 88-300VDC or 85-264VAC
- Popular low voltage ranges: 24VDC(12-36VDC), 48VDC (36-72VDC)
- Screw or pluggable terminal blocks ensure reliable maintenance free connections
- CSA/UL 60950 safety approved to +85°C
**RUGGEDCOM RSG2300**

### Modularity
- 4 available slots
- Up to 4 modular Gigabit ports
- Up to 8 modular Fast Ethernet ports
- Dual and single port module

### Modular Gigabit Port Types
- Up to 4 Gigabit modular ports
- 10/100/1000 TX RJ45
- 1000SX Multimode fiber
- 1000LX Singlemode fiber
- Pluggable Optics (SFP and GBIC)
- SC, ST, LC and MTRJ

### Modular Fast Ethernet Port Types
- Up to 8 Fast Ethernet Ports
- 10/100TX RJ45
- 100FX Multi- and singlemode
- SC, SST, LC and MTRJ

### Standard Fast Ethernet Port Types
- 24 10/100TX copper Ethernet ports

### Integrated Power Supply
- Universal high-voltage range: 88-300VDC or 85-264VAC
- Popular low voltage DC ranges: 24VDC (12-36VDC), 48VDC (36-72VDC)
- True Dual Redundant Parallel Load Sharing (Optional)
- Screw or pluggable terminal blocks available

### Integrated Power Supply
- Universal high-voltage range: 88-300VDC or 85-264VAC
- Popular low voltage DC ranges: 24VDC (12-36VDC), 48VDC (36-72VDC)
- True Dual Redundant Parallel Load Sharing (Optional)
- Screw or pluggable terminal blocks available

### Critical alarm relay
- Form-C contact ratings:
  - Max voltage 250VAC, 125VDC
  - Max current 2A@250VAC, 2A@30VDC

### Operating temperature
- -40°C to +85°C
- No fans

### Mounting options
- Panel/Din rail
- 19" rack mount
- Front or rear mount
ROS Features

Cyber Security
Cyber security is an urgent issue in many industries where advanced automation and communications networks play a crucial role in mission critical applications and where high reliability is of paramount importance. Key ROS features that address security issues at the local area network level include:

- **Passwords** – Multi-level user passwords secures switch against unauthorized configuration
- **SSH/SSL/SFTP** – Extends capability of password protection to add 128-bit encryption of passwords and data as they cross the network
- **Enable/Disable ports** – Capability to disable ports so that traffic can not pass
- **802.1Q VLAN** – Provides the ability to logically segregate traffic between predefined ports on switches
- **MAC based port security** – The ability to secure ports on a switch so only specific Devices / MAC addresses can communicate via that port
- **802.1x Port based network access control** – The ability to lock down ports on a switch so that only authorized clients can communicate via this port
- **RADIUS** – authentication service using MD5 hash and providing centralized password management
- **SNMPv3** – encrypted authentication access security and data encryption (CBC-DES with 56-bit encryption key)
- **Secure socket layer** – Web-based management using SSL with data encryption (128-bit encryption key)
- **RSA** – 1024 bit key for key management and key exchange
- **TACACS+** – Terminal Access Control and Accounting Services. Client provides encrypted authentication and authorization
- **Point to Point (PPP)** – using CHAP (MD5 Hash) authentication service
- **SFTP** – Secure File Transfer Protocol using SSH encryption

The ROS cyber security features are included to help address the various industry specific security standards such as NERC CIP, ISA S99, AGA 12, IEC 62443, ISO 17799:2005 and PCSRF SPP-ICS.

Enhanced Rapid Spanning Tree Protocol (eRSTP)
RUGGEDCOM eRSTP allows the creation of fault-tolerant ring and mesh Ethernet networks that incorporate redundant links that are ‘pruned’ to prevent loops. eRSTP yields worst-case fault recovery of 5ms times the ‘bridge diameter’ and allows rings of up to 160 switches. For example, a ring of ten switches will have fault recovery times under 50ms. eRSTP implements both STP and RSTP to ensure interoperability with commercial switches unlike other proprietary ‘ring’ solutions.

1 eRSTP fault recovery times may be approximated as follows:
For 100 Mbps, fault recovery performance is <5ms/hop
1 For 1,000 Mbps, fault recovery performance is <5ms/hop + 20ms

Quality of Service (IEEE 802.1p)
Some networking applications such as real-time control or VoIP (voice over IP) require predictable arrival times for Ethernet frames. Switches can introduce latency in times of heavy network traffic due to the internal queues that buffer frames and then transmit on a first come first serve basis. ROS supports ‘Class of Service’ in accordance with IEEE 802.1p that allows time critical traffic to jump ahead to the front of the queue thus minimizing latency and reducing jitter to allow such demanding applications to operate correctly. ROS allows priority classification by port, tags, MAC address, and IP type of service (ToS). A configurable “weighted fair queuing” algorithm controls how frames are emptied from the queues.

VLAN (IEEE 802.1Q)
Virtual local area networks (VLAN) allow the segregation of a physical network into separate logical networks with independent broadcast domains. A measure of security is provided since hosts can only access other hosts on the same VLAN and traffic storms are isolated. ROS supports 802.1Q tagged Ethernet frames and VLAN trunks. Port based classification allows legacy devices to be assigned to the correct VLAN. GVRP support is also provided to simplify the configuration of the switches on the VLAN.

Link Aggregation (802.3ad)
The link aggregation feature provides the ability to aggregate several Ethernet ports into one logical link (port trunk) with higher bandwidth. This provides an inexpensive way to set up a high speed backbone to improve network bandwidth. This feature is also known as “port trunking,” “port bundling,” “port teaming,” and “Ethernet trunk.”

IGMP Snooping
ROS uses IGMP snooping (Internet Group Management Protocol v1&v2) to intelligently forward or filter multicast traffic streams (e.g. MPEG video) to or from hosts on the network. This reduces the load on network trunks and prevents packets from being received on hosts that are not involved. ROS has a very powerful implementation of IGMP snooping that:

- **Can be enabled on a per VLAN basis**
- **Detects and filters all multicast streams regardless of whether subscribers exist**
- **Supports “router-less” operation by supporting an “active” mode**
- **Restores traffic streams immediately after an RSTP topology change**
ROS Features

SNMP (Simple Network Management Protocol)
SNMP provides a standardized method for network management stations to interrogate devices from different vendors. SNMP versions supported by ROS are v1, v2c, and v3. SNMPv3, in particular, provides security features such as authentication, privacy with data encryption (CBC-DES with 56-bit encryption key) and access control not present in earlier SNMP versions. ROS also supports numerous standard MIBs (Management Information Base) allowing for easy integration with any network management system (NMS).

A feature of SNMP supported by ROS is the ability to generate "traps" upon system events. RUGGEDCOM NMS, the RUGGEDCOM management solution, can record traps from multiple devices providing a powerful network troubleshooting tool. It also provides a graphical visualization of the network and is fully integrated with all RUGGEDCOM products.

SNTP (Simple Network Time Protocol)
SNTP automatically synchronizes the internal clock of all ROS devices on the network. This allows for correlation of time stamped events for troubleshooting.

SCADA and Industrial Automation
ROS contains features that optimize network performance and simplify switch management based on the unique requirements found in SCADA and industrial automation applications. Features such as Modbus TCP management for retrieval of switch data using the ubiquitous Modbus protocol and DHCP Option 82, a Rockwell Automation ODVA requirement for IP address assignment based on the location of the end device, provide capabilities not found in typical "commercial" or "office grade" Ethernet switches.

Port Based Network Access Control (802.1x)
ROS supports the IEEE 802.1x standard that defines a mechanism for port-based network access control which provides a means of authenticating and authorizing devices attached to LAN ports.

Port Rate Limiting
ROS supports configurable rate limiting per port to limit unicast and multicast traffic. This can be essential to managing precious network bandwidth for service providers. It also provides edge security for denial of service (DoS) attacks.

Broadcast Storm Filtering
Broadcast storms wreak havoc on a network and can cause attached devices to malfunction. This could be disastrous on a network with mission critical equipment. ROS limits this by filtering broadcast frames with a user-defined threshold.

Port Mirroring
ROS can be configured to duplicate all traffic on one port to a designated mirror port. When combined with a network analyzer, this can be a powerful troubleshooting tool.

Loss of Link Management
Some intelligent electronic devices (IEDs) have dual fiber optic ports with automatic failover to a backup port should the primary fail. ROS ensures this mechanism works reliably under all failure modes by appropriately disabling link signals when required. ROS also flushes learned MAC addresses to ensure the failover occurs quickly.

Port Configuration and Status
ROS allows individual ports to be 'hard' configured for speed, duplex, auto-negotiation, flow control and more. This allows proper connection with devices that do not negotiate or have unusual settings. Detailed status of ports with alarm and SNMP trap on link problems aid greatly in system troubleshooting.

Port Statistics and RMON (Remote Monitoring)
ROS provides continuously updating statistics per port that provide both ingress and egress packet and byte counters as well as detailed error figures. Also provided is full support for the RMON statistics, history, alarms, and event groups. RMON allows for very sophisticated data collection, analysis and detection of traffic patterns.

Event Logging and Alarms
ROS records all significant events to a non-volatile system log allowing forensic troubleshooting. Events include link failure and recovery, unauthorized access, broadcast storm detection, and self-test diagnostics among others. Alarms provide a snapshot of recent events that have yet to be acknowledged by the network administrator. An external hardware relay is de-energized during the presence of critical alarms allowing an external controller to react if desired.

HTML Web Browser and Telnet/SSH User Interfaces
ROS provides a simple, intuitive user interface for configuration and monitoring via a standard graphical web browser or via Telnet/SSH. All system parameters include detailed on-line help to make setup a breeze. ROS, presents a common look and feel and standardized configuration process allowing easy migration to other RUGGEDCOM managed products.

Configuration via ASCII Text File
All configuration parameters are stored in an ASCII formatted text file that can easily be transferred via TFTP, SFTP or Xmodem. The configuration file can be saved for backup purposes and easily manipulated by a text editor. The same text file can be downloaded to the switch at a later date in order to re-configure or restore a previous configuration.

Command Line Interface (CLI)
A command line interface can be used in conjunction with remote shell to automate data retrieval, configuration updates, and firmware upgrades. A powerful SQL-like capability allows expert users the ability to selectively retrieve or manipulate any parameters the device has to offer.

1 RUGGEDCOM specified severity levels.
2 Class 2 refers to “Measuring relays and protection equipment for which a very high security margin is required or where the vibration levels are very high, (e.g. shipboard application and for severe transportation conditions”).
3 Only applicable to functional earth connections separated from the safety earth connection.
Technical Specifications

Power Supply
- Power consumption: 32W Max
- 24VDC: 12-36VDC, 1.2A
- 48VDC: 36-72VDC, 0.6A
- HI voltage AC/DC: 88-300VDC or 85-264VAC

Critical Alarm Relay
- Form-C contact ratings:
  - Max Voltage 250VAC, 125VDC
  - Max Current 2A@250VAC, 2A@30VDC

Physical Dimensions
- Height: 1.74” (44mm)
- Width: 18.3” (464mm)
- Depth: 12.4” (315mm)
- Weight: 5.2kg
- Ingress protection: IP40 (1mm objects)
- Enclosure: 18 AWG galvanized steel enclosure
- Mounting: DIN rail or panel mounted

Switch Properties
- Switching method: Store and forward
- Switching latency: 7 μs (100Mbps)
- Switching bandwidth: 13.6 Gbps
- MAC addresses: 8192
- MAC address table size: 64kbytes
- Priority queues: 4
- Frame buffer memory: 2 Mbit
- Simultaneous VLANs: 255
- VLAN ID range: 1 to 4094
- IGMP multicast groups: 256
- Port rate limiting
- No head of line blocking

Regulatory Approvals
- ISO: Designed and manufactured using an ISO9001: 2000 certified quality program
- CE marking
- Emissions: FCC Part 15 (Class A), EN55022 (CISPR22 Class A)
- Safety: cCSAus (Compliant with CSA C22.2 No. 60950, UL 60950, EN60950)
- Laser eye safety (FDA/CDRH): Complies with 21 CFR Chapter 1, Subchapter J

Network Management
- HTTPS graphical web-based, SSL (128-bit encryption)
- SNMP v1, v2c, v3 (56-bit encryption)
- Telnet, VT100, SSH/SFTP (128-bit encryption)
- Command Line Interface (CLI)
- RSA key management (1024 bit key)
- Authentication and accounting - TACACS+ (encrypted), RADIUS client, PPP

Warranty
- 5 Years – Applicable to design and manufacturing related product defects

EMI Immunity and Environmental Compliance
- IEC 61000-6-2 Industrial (Generic)
- IEC 61800-3 Industrial (Variable Speed Drive Systems)
- IEC 61850-3 Electric Utility Substations
- IEEE 1613 Electric Utility Substations
- NEMA TS 2 Traffic Control Equipment
- Hazardous Location Compliance: Class 1, Division 2

IEC 61850 Compliance
- IEC 61850-9-2 Sampled Values
- IEC 61850-8-1 GOOSE Messages

IEEE Compliance
- 802.3-10BaseT
- 802.3u-100BaseTX, 100BaseFX
- 802.3x-Flow Control
- 802.3ad-Link Aggregation
- 802.3af-Power Over Ethernet (PoE)
- 802.1D-MAC Bridges
- 802.1D-Spanning Tree Protocol
- 802.1p-Class of Service
- 802.1Q-VLAN Tagging
- 802.1w-Rapid Spanning Tree Protocol
- 802.1x-Port Based Network Access Control
- 802.1Q-2005 (formerly 802.1s) MSTP

07 = 2 x 100FX – Singlemode, 1310nm, ST, 20km
08 = 2 x 100FX – Singlemode, 1310nm, SC, 20km
09 = 2 x 100FX – Singlemode, 1310nm, LC, 20km
10 = 2 x 100FX – Singlemode, 1310nm, SC, 50km
11 = 2 x 100FX – Singlemode, 1310nm, LC, 50km
12 = 2 x 100FX – Singlemode, 1310nm, SC, 90km
13 = 2 x 100FX – Singlemode, 1310nm, LC, 90km

**S3 and S4:**
100FX/Gigabit Ethernet Modules for Slots 3 and 4
00 = Empty
01 = 2 x 10/100/1000Tx RJ45
02 = 2 x 1000SX – Multimode, 850nm, LC, 500m
03 = 2 x 1000LX – Singlemode, 1310nm, SC connectors, 10km
04 = 2 x 1000LX – Singlemode, 1310nm, LC connector, 10km
05 = 2 x 1000LX – Singlemode, 1310nm, SC connectors, 25km
06 = 2 x 1000LX – Singlemode, 1310nm, LC connectors, 25km
07 = 2 x 1000LX SFP – Blank (no optical transceiver)
08 = 2 x 1000SX SFP – Multimode, 850nm, LC, 500m
09 = 2 x 1000LX SFP – Singlemode, 1310nm, LC, 10km
10 = 2 x 1000LX SFP – Singlemode, 1310nm, SC, 10km
11 = 2 x 1000LX SFP – Singlemode, 1310nm, SC, 25km
12 = 2 x 1000LX GBIC – Blank (no optical transceiver)
13 = 2 x 1000LX GBIC – Singlemode, 1310nm, SC, 10km
14 = 2 x 1000LX GBIC – Singlemode, 1310nm, SC, 25km
15 = 2 x 1000LX GBIC – Singlemode, 1550nm, SC, 50km
16 = 2 x 1000FX – Multimode, 1300nm, ST
17 = 2 x 1000FX – Multimode, 1300nm, SC
18 = 2 x 1000FX – Multimode, 1300nm, LC
19 = 2 x 1000FX – Multimode, 1300nm, MTRJ
20 = 2 x 1000FX – Singlemode, 1310nm, ST, 20km
21 = 2 x 1000FX – Singlemode, 1310nm, SC, 20km
22 = 2 x 1000FX – Singlemode, 1310nm, LC, 20km
23 = 2 x 1000FX – Singlemode, 1310nm, SC, 50km
24 = 2 x 1000FX – Singlemode, 1310nm, LC, 50km
25 = 2 x 1000FX – Singlemode, 1310nm, SC, 90km
26 = 2 x 1000FX – Singlemode, 1310nm, LC, 90km
27 = 2 x 1000TX, SFP, RJ45

1. Distance ratings are typical but will depend on type of cabling, number of connectors and splices.
2. These transceivers have an operating temperature range of -20 °C to +85°C. All other transceivers have an operating temperature range of -40°C to +85°C.
3. Base unit comes standard with 24 10/100TX RJ45 ports.
4. SFP pluggable optics that consist of a blank cage (C07 o D07) plus specified fiber optic interface(s) installed.
5. GBIC pluggable optics that consist of a blank cage (C12 or D12) plus specified fiber optic interface(s) installed.
6. Power Supply 1 and 2 must be either both screw terminal block or both pluggable terminal block.
7. Switch must be ordered with at least one module installed.
Example Order Codes

6GK6023-0AS21-2DB0-Z A01+B01+C00+D00
19" Rack mounted, 24VDC power supply, 48VDC power supply, 28 10/100 RJ45 Ethernet Ports, with Ethernet ports on the rear.

6GK6023-0AS22-2DC0-Z A01+B01+C16+D16
19" Rack mounted, 48VDC power supply, 48VDC, 28 10/100 RJ45 Ethernet Ports, 4 100FX (Multi Mode 1300nm Fiber) Ethernet ports, with Ethernet ports on the front.

6GK6023-0AS23-3DB1-Z A01+B01+C03+D03
19" Rack mounted, HI power supply, HI power supply, 28 10/100 RJ45 Ethernet Ports, 4 1000LX (Gigabit) Ethernet ports, with Ethernet ports on the rear, conformal coating.

Accessories/Options

6GK6000-8MQ00-0AA0 – Cable support bracket (one)

6GK6000-8BA00-0AA0 – Power cable (North America three prong connector -> beau)
