Overview

The CALOMAT 6 gas analyzer is primarily used for quantitative determination of H₂ or He in digital or quasi-digital non-corrosive gas mixtures. Concentrations of other gases can also be measured if their thermal conductivities differ significantly from the residual gases like Ar, CO₂, CH₄, NH₃.

Benefits

- Small T₉₀ time due to micromechanical-produced Si sensor
- Universally applicable hardware basis, high measuring range dynamics (e.g., 0 to 1 %, 0 to 100 %, 95 to 100 % H₂)
- Integrated correction of cross-interference, no external calculation required
- Open interface architecture (RS 485, RS 232, PROFIBUS)
- SIPROM GA network for maintenance and service information (option)
- Electronics and physics: gas-tight separation, purgeable, IP65, long service life even in harsh environments
- Ex(p) for Zones 1 and 2 (in accordance with 94/9/EC (ATEX 2G and ATEX 3G), and Class I Div 2 (CSA) Ex(n)

Application

Fields of application

- Pure gas monitoring (0 to 1 % H₂ in Ar)
- Protective gas monitoring (0 to 2 % He in N₂)
- Hydroargon gas monitoring (0 to 25 % H₂ in Ar)
- Forming gas monitoring (0 to 25 % H₂ in N₂)
- Gas production:
  - 0 to 2 % He in N₂
  - 0 to 10 % Ar in O₂
- Chemical applications:
  - 0 to 2 % H₂ in NH₃
  - 50 to 70 % H₂ in N₂
- Wood gasification (0 to 30 % H₂ in CO/CO₂/CH₄)
- Blast furnace gas (0 to 5 % H₂ in CO/CO₂/CH₄/N₂)
- Bessemer converter gas (0 to 20 % H₂ in CO/CO₂)
- Monitoring equipment for hydrogen-cooled turbo-alternators:
  - 0 to 100 % CO₂/Ar in air
  - 0 to 100 % H₂ in CO₂/Ar
  - 80 to 100 % H₂ in air
- Versions for the analysis of flammable and non-flammable gases or vapors for use in hazardous areas (Zone 1 and Zone 2)

Special versions

Special applications

In addition to the standard combinations, special applications are also available upon request (e.g., higher sample gas pressure up to 2,000 hPa absolute).

Design

19" rack unit

- With 4 HU for installation
  - In hinged frame
  - In cabinets with or without telescope rails
- Front plate can be swung down for servicing purposes (laptop connection)
- Internal gas paths: stainless steel pipe (mat. no. 1.4571)
- Gas connections for sample gas inlet and outlet and for purging gas: fittings, pipe diameter of 6 mm or¼"

Field device

- Two-door enclosure (IP65) with gas-tight separation of analyzer and electronics sections
- Individually purgeable enclosure halves
- Stainless steel gas path and stubs (mat. no. 1.4571)
- Purging gas connections: pipe diameter 10 mm or 3/8"
- Gas connections for sample gas inlet and outlet: clamping ring connection for a pipe diameter of 6 mm or¼"

Display and control panel

- Large LCD panel for simultaneous display of:
  - Measured value (digital and analog displays)
  - Status bar
  - Measuring ranges
- Contrast of LCD panel adjustable using menu
- Permanent LED backlighting
- Washable membrane keyboard with five softkeys
- Menu-driven operation for parameterization, test functions, adjustment
- User help in plain text
- Graphic display of concentration trend; programmable time intervals
- Bilingual operating software German/English, English/Spanish, French/English, Spanish/English, Italian/English

Input and outputs

- One analog output per medium (from 0, 2, 4 to 20 mA; NAMUR parameterizable)
- Two analog inputs configurable (e.g., correction of cross-interference or external pressure sensor)
- Six digital inputs freely configurable (e.g., for measurement range switchover, processing of external signals from sample preparation)
- Six relay outputs, freely configurable (e.g., failure, maintenance demanded, threshold alarm, external magnetic valves)
- Expansion by eight additional digital inputs and eight additional relay outputs each (e.g., for autocalibration with up to four calibration gases)

Communication

RS 485 present in basic unit (connection from the rear; for the slide-in module also behind the front plate).

Options

- RS 485/RS 232 converter
- RS 485/Ethernet converter
- RS 485/USB converter
- Connection to networks via PROFIBUS DP/PA interface
- SIPROM GA software as the service and maintenance tool

Purging gas  Sample gas

Purging gas
Function

**Principle of operation**

The measuring principle is based on the different thermal conductivity of gases.

The CALOMAT 6 works with a micromechanically produced Si chip whose measuring membrane is equipped with thin-film resistors.

The resistors are kept at a constant temperature. This requires an current intensity depending on the thermal conductivity of the sample gas. This "raw value" is processed further electronically to calculate the gas concentration.

The sensor is located in a thermostatically-controlled stainless steel enclosure in order to prevent the influence of changes in ambient temperature.

To prevent the influence of changes in flow, the sensor is positioned in a bore located to the side of the main flow.

**Note**

The sample gases must be fed into the analyzers free of dust. Condensation (dew point sample gas < ambient temperature) is to be avoided in the measurement chambers. Therefore, the use of gas modified for the measuring tasks is necessary in most application cases.

**CALOMAT, principle of operation**

**Essential characteristics**

- Four freely parameterizable measuring ranges, also with suppressed zero point, all measuring ranges linear
- Smallest measuring spans up to 1 % H$_2$ (with disabled zero point: 95 to 100 % H$_2$) possible
- Measuring range identification
- Galvanically isolated measured-value output 0/2/4 to 20 mA (also inverted)
- Autoranging or manual measurement range switchover possible; remote switching is also possible
- Storage of measured values possible during adjustments
- Wide range of selectable time constants (static/dynamic noise suppression); i.e. the response time of the analyzer can be matched to the respective measuring task
- Short response time
- Low long-term drift
- Measuring point switchover for up to 6 measuring points (programmable)
- Measuring range identification
- Measuring point identification
- External pressure sensor can be connected – for the correction of sample gas fluctuations
- Automatic range calibration can be parameterized

- Operation based on the NAMUR recommendation
- Two control levels with their own authorization codes for the prevention of accidental and unauthorized operator interventions
- Simple handling using a numerical membrane keyboard and operator prompting
- Customer-specific analyzer options such as:
  - Customer acceptance
  - TAG labels
  - Drift recording
  - Clean for O$_2$ service

**Measuring spans**

The smallest and largest possible spans depend on both the measured component (type of gas) and the respective application.

The smallest possible spans listed below refer to N$_2$ as the residual gas. With other gases which have a larger/smaller thermal conductivity than N$_2$, the smallest possible span is also larger/smaller.

**Influence of interfering gases**

Knowledge of the sample gas composition is necessary to determine the influence of residual gases with several interfering components.

The following table lists the zero offsets expressed in % H$_2$ resulting from 10 % residual gas (interfering gas) in each case.

<table>
<thead>
<tr>
<th>Component</th>
<th>Zero offset</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ar</td>
<td>-1.28 %</td>
</tr>
<tr>
<td>CH$_4$</td>
<td>+1.59 %</td>
</tr>
<tr>
<td>C$_2$H$_6$ (non-linear response)</td>
<td>+0.04 %</td>
</tr>
<tr>
<td>C$_3$H$_8$</td>
<td>-0.80 %</td>
</tr>
<tr>
<td>CO</td>
<td>-0.11 %</td>
</tr>
<tr>
<td>CO$_2$</td>
<td>-1.07 %</td>
</tr>
<tr>
<td>He</td>
<td>+6.51 %</td>
</tr>
<tr>
<td>H$_2$O (non-linear response)</td>
<td>+1.58 %</td>
</tr>
<tr>
<td>NH$_3$ (non-linear response)</td>
<td>+1.3 %</td>
</tr>
<tr>
<td>O$_2$</td>
<td>+0.18 %</td>
</tr>
<tr>
<td>SF$_6$</td>
<td>-2.47 %</td>
</tr>
<tr>
<td>SO$_2$</td>
<td>-1.34 %</td>
</tr>
<tr>
<td>100 % air (dry)</td>
<td>+0.27 %</td>
</tr>
</tbody>
</table>

For residual gas concentrations differing from 10 %, the corresponding multiple of the associated value in the table provides an acceptable approximation. This is valid for for residual gas concentrations up to 25 % (dependent on type of gas).

The thermal conductivity of most gas mixtures has a non-linear response. Even ambiguous results, such as e.g. with NH$_3$/N$_2$ mixtures, can occur within a specific concentration range.
In addition to a zero offset, it should also be noted that the gradient of the characteristic is influenced by the residual gas. However, this effect is negligible for most gases.

In case of correction of the influence of interfering gases with additional analyzers (ULTRAMAT 6/ULTRAMAT 23), the resulting measuring error can – depending on the application – amount up to 5 % of the smallest measuring range of the respective application.

**Example of correction of cross-interference**

**Specification for the interface cable**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Surge impedance</td>
<td>100 ... 300 Ω, with a measuring frequency of &gt; 100 kHz</td>

<td>&gt; 0.22 mm², corresponds to AWG 23</td>
</tr>
<tr>
<td>Cable type</td>
<td>Twisted pair, 1 x 2 conductors of cable section</td>
</tr>
<tr>
<td>Signal attenuation</td>
<td>Max. 9 dB over the whole length</td>
</tr>
<tr>
<td>Shielding</td>
<td>Copper braided shield or braided shield and foil shield</td>
</tr>
<tr>
<td>Connection</td>
<td>Pin 3 and pin 8</td>
</tr>
</tbody>
</table>

**Bus terminating resistors**

Pins 3-7 and 8-9 of the first and last connectors of a bus cable must be bridged (see graphic).

**Note**

It is advisable to install a repeater on the device side in the case of a cable length of more than 500 m or with high interferences.

Up to four components can be corrected via the ELAN bus, correction of cross-interference can be carried out for one or two components via the analog input.

### Technical specifications

#### General information
- Based on DIN EN 61207/IEC 1207. All data based on digital gas mixture H₂ in N₂

#### Measuring ranges
- 4, internally and externally switchable; automatic measuring range change-over also possible

#### Largest possible measuring span
- 100 vol.% H₂ (for smallest measuring span, see “Function”)

#### Measuring ranges with suppressed zero point
- Any zero point within 0 ... 100 vol.% can be implemented; smallest possible measuring span: 5% H₂

#### Operating position
- Front wall, vertical

#### Conformity
- CE mark in accordance with EN 61326/A1 and EN 61010/1

#### Design, enclosure
- Degree of protection: IP65 according to EN 60529
- Weight: Approx. 25 kg

#### Electrical characteristics
- EMC interference immunity (electromagnetic compatibility)
  - All signal lines must be shielded.
  - Measured value deviations of up to 4% of the smallest measuring range may occur in ranges with strong electromagnetic interference.

#### Electrical safety
- In accordance with EN 61010-1; over-voltage category II

#### Auxiliary power (see nameplate)
- 100 V -10% ... 120 V +10% AC, 48 ... 63 Hz or 200 V -10% ... 240 V +10% AC, 48 ... 63 Hz

#### Power consumption (unit)
- Approx. 20 VA

#### Fuse values
- 100 to 120 V: 1.0T/250
- 200 ... 240 V: 0.63 T/250

#### Gas inlet conditions
- Sample gas pressure: 800 to 1 100 hPa (absolute)
- Sample gas flow: 30 to 90 l/h (0.5 to 1.5 l/min)
- Sample gas temperature: Min. 0 to max. 50 °C, but above the dew point
- Temperature of the measuring cell: Approx. 60 °C
- Sample gas humidity: < 90% relative humidity
- Purging gas pressure
  - Permanent: 165 hPa above ambient pressure
  - For short periods: Max. 250 hPa above ambient pressure

#### Time response
- Based on sample gas pressure

#### Warm-up period
- < 30 min (the technical specification will be met after 2 hours)

#### Delayed display (T₉₀)
- < 5 s

#### Electrical damping
- 0 ... 100 s, configurable

#### Dead time (at 1 l/min)
- Approx. 0.5 s

#### Measuring response
- Based on sample gas pressure
  - 1 013 hPa absolute, 0.5 l/min sample gas flow and 25 °C ambient temperature

#### Output signal fluctuation (maximum accuracy achieved after 2 hours)
- < ± 0.75% of the smallest possible measuring range according to rating plate, with electronic damping constant of 1 s (α = 0.25%)

#### Zero point drift
- < ± 1%/week of the smallest possible measuring span according to rating plate

#### Measured-value drift
- < ± 1%/week of the smallest possible measuring span according to rating plate

#### Repeatability
- < 1% of the current measuring range

#### Detection limit
- 1% of the current measuring range

#### Linearity error
- < ± 1% of the smallest measuring range

#### Influencing variables
- Based on sample gas pressure
  - 1013 hPa absolute, 0.5 l/min sample gas flow and 25 °C ambient temperature

#### Ambient temperature
- < 1%/10 K referred to smallest possible measuring span according to rating plate

#### Accompanying gases
- Deviation from zero point (for influence of interfering gas, see section “Cross-interference”)

#### Sample gas flow
- < 0.2% of the smallest possible span according to rating plate with a change in flow of 0.1 l/min within the permissible flow range

#### Sample gas pressure
- < 1% of the current measuring range with a pressure change of 100 hPa

#### Electrical inputs and outputs
- Analog output: 0/2/4 ... 20 mA, floating; load max. 750 Ω
- Relay outputs: 6, with changeover contacts, freely configurable, e.g. for measuring range identification; load: 24 V AC/DC/1 A, floating
- Analog inputs: 2, dimensioned for 0/2/4 ... 20 mA for external pressure sensor and correction of cross-interference
- Digital inputs: 6, designed for 24 V, floating, freely configurable, e.g. for measuring range switchover
- Serial interface: RS 485
- Options: AUTOCAL function each with 8 additional digital inputs and relay outputs, also with PROFIBUS PA or PROFIBUS DP

#### Climatic conditions
- Permissible ambient temperature
  - -30 ... +70 °C during storage and transportation, 5 ... 45 °C in operation

- Permissible humidity (dew point must not be fallen below)
  - < 90% relative humidity as annual average, during storage and transportation

If the CALOMAT 6 is supplied with a specially cleaned gas path for high oxygen context (“Cleaned for O2 service”), please ensure that you specify this when ordering spare parts. This is the only way to guarantee that the gas path will continue to comply with the special requirements for this version.
