Process Instrumentation and Analytics

Precise process monitoring in tough environments

Power

Answers for industry.
Reliable and precise process monitoring

Highest efficiency, reduced emissions, energy optimization and, moreover, safety are big issues for power producers. Partnering with Siemens gives the precision, integration, and reliability in process instrumentation and analytics to help address these issues.

Our process instrumentation and analytics devices ensure your efficient operations, energy optimization, emissions and safety. They put accuracy and reliability at the heart of your operations. And you have the reassurance of seamless integration with your management control and other systems. But they also give you much, much more.

Precise measurement for critical applications, as well as reliable monitoring for safe and efficient power generation help decrease operating costs and avoid downtimes. Ensure environmental compliance and lowest emission with intelligent process control for optimal flue gas treatment and CO₂ reduction, as well as continuous emission monitoring systems.

Safety and security are enhanced by using SIL standard instrumentation and smart instruments that reduce the need for field maintenance and thus keep the workers safe.

We also help you make the most of your human resources through easy installation and commissioning. Quick Start Wizards, devices that have easy-to-understand diagnostics and seamless integration with the distributed control system (DCS) all mean that you can focus your talent on your productivity. Start-up and commissioning is faster, maintenance is minimal, and day-to-day operation is smoother.

Our technology is designed to fit with the tough and often extreme conditions encountered in the power industry. Solutions such as remote-mounted transmitters, heavy-duty dust-tight enclosures and non-contacting sensors all mean that you can avoid accidents and hazardous situations.

With Siemens you have the reassurance of best-in-class products and a partner who understands your industry.
PIA Life Cycle Portal

The PIA Life Cycle Portal is a web-based application for easy and convenient product selection and configuration.

How to get access
You can access the PIA Life Cycle Portal around-the-clock at www.siemens.com/piaportal. It offers you active support to find the best solution from the extensive Siemens portfolio of sensors and process analytical products. The portal can be used to see how different solutions can be put to use in process and factory automation.

You can choose between several selection access options to find the appropriate product solution for your specific requirements:

- **Direct access** sends you straight to a specific configuration if you know the product you are seeking.
- **“Guided selection”** lets you to select the appropriate application, technology or industry and specify the measurement task based on the various relevant parameters for your particular application.

Advantages at a glance:
- Convenient product selection support with answers to typical questions
- A variety of selection possibilities: see the sample power plants and simply select from the recommended process instrumentation and analytics products
- Project lists for an order enquiry can be quickly created
- Different possibilities for processing data and information
- No separate installation needed
- Product selection for spare parts
- The latest product data and information for Siemens process instrumentation and analytics

| SITRANS LUT400  | Compact, single-point, long-range ultrasonic controllers for continuous level, or volume measurement of liquids, slurries, and solids, and high-accuracy monitoring of open channel flow. | - A reliable continuous level device using proven ultrasonic technology  
- 3 relays for pump and process control  
- Separated transceiver/transducer protects the electronics from extreme vibration  
- The non-contacting ultrasonic transducer is rugged and fully potted to provide long-term reliability in a harsh environment  
- Sonic Intelligence is standard and is proven to provide superior performance in difficult conditions  
- Provides accurate and repeatable measurement, even in dusty, turbulent, and vapor-filled environments or situations with product buildup  
- Self check and diagnostic alarms available allow better maintenance schedules and improves asset management  
- PROFIBUS PA communication  
- Requires little or no maintenance, despite the extreme process conditions  
- High resistance to mechanical forces and high bulk material loads  
- Suitable for low-density material  
- The unit is only tip-sensitive, meaning that it will remain reliable even when there is product buildup on the upper part of the sensor  
- Customer-specific lengths up to 20,000 mm (787”)  
- Durable short fork option with 165 mm (6.5 inch) insertion length  
- Designed for industrial use in all areas of process technology for liquids and slurries  
- Compact tuning fork insertion length of 40 mm (1.57”) for confined space applications  
- Can be used in difficult conditions including turbulence, air bubbles, foam generation, buildup, or external vibration  
- Fault monitoring for corrosion, loss of vibration or line break to the piezo drive  
- SIL 2 qualified for high-level and dry-run applications  
- Proven paddle switch technology to detect the presence or absence of bulk solids materials with bulk densities as low as 15 g/l (0.9 lb/ft)  
- High-integrity mechanical seal  
- Unique friction clutch mechanism to increase motor life  
- Rotatable enclosure  
- Simple installation through existing process connection  
- High-temperature model, up to 600 °C (1112 °F) and optional extension kit available  |
| Pointek CLS 200 / 300 | Inverse frequency shift capacitance level switches with optional rod/cable choices and configurable output. They are ideal for detecting liquids, solids, slurries, foam and interfaces in demanding conditions where high pressure and temperatures are present. | - More information: www.siemens.com/sitranslut400  
- More information: www.siemens.com/pointekcls200  
- More information: www.siemens.com/pointekcls300 |
| SITRANS LVS100 / 200 | Vibrating Fork level switch, detects high, low or demand levels of dry bulk solids in bins, silos or hoppers. The liquid/solid interface version detects settled solids within liquids or solids within confined spaces such as feed pipes. | - High-level detection e.g. filters, coal, fly ash, chemicals and water.  
- High-/low level detection of solids.  
- High-/low level detection of liquids and slurries.  
- High-/low-level detection of solids.  |
| SITRANS LVL100 / 200 | Vibrating level switch for use in all liquid and slurry applications such as overfill protection, high- or low-level detection and pump protection. For use in SIL-2 applications. | - More information: www.siemens.com/sitranslvs100  
- More information: www.siemens.com/sitranslvs200  
- More information: www.siemens.com/sitranslvs100  
- More information: www.siemens.com/sitranslvs200 |
| SITRANS LPS200 | Rotating Paddle Switch technology for bulk solids. It has a rugged design for use in harsh conditions in the solids industry. It comes in a variety of configurations including compact, extended and cable extension. | - More information: www.siemens.com/sitranslps200  
- More information: www.siemens.com/sitranslps200 |

**Typical applications**

- Open-air storage, material handling, coal feeding, coal bunkers, waste material, sump level and pump control, crane positioning.
- High-/low-level detection e.g. filters, coal, fly ash, chemicals and water.
- High-/low level detection of solids.
- High-/low level detection of liquids and slurries.
- High-/low-level detection of solids.

</table>

**Features and benefits**

**Stand-alone weighing integrators**

- Offer rate, totals, alarms, analogue outputs and digital communications
- Differential speed detection with second speed sensor
- Suitable for belt scale custody approval
- Automatic zero and electronic span calibration
- Alarms for rate, load, speed, or diagnostic error
- On-board Modbus®, optional PROFINET DP, Allen-Bradley® RIO, Ethernet IP, Modbus TCPIIP, PROFINET and DeviceNet™
- Comprehensive weighfeeder control functions
- PID control and on-line calibration with optional analog I/O card
- Moisture meter input with optional analog I/O card for calculation of dry weight

**PLC-based weighing modules**

- Complete integration of the SIWAREX weighing module into the SIMATIC system platform
- Using standard SIMATIC components, it is simple to adapt the weighing system to your individual requirements
- Standardized interfaces, totally integrated functions, and uniform tools enable cost-effective configuration
- SIWAREX WP231 is programmable via the Totally Integrated Automation (TIA) Portal engineering platform

**SITRANS F M MAG 3100**

- Flexible design with wide range of materials
- Easy “plug and play” installation and servicing of flowmeter
- Highly resistant liner material to both abrasive and chemical media

**Typical applications**

**BW500/L integrator for use with belt scales or BW500 for use with weighfeeders**

- Static weighing, batching, dosing, dynamic weighing, loss-in-weight.

**SF500 integrator for use with solid flowmeter**

- General purpose flow measurement e.g. water, cooling system and chemicals.

**Custody transfer applications**: OIML R49, MI-001.

</table>
| SITRANS FUS SONO3100/FUS060 | A flowmeter consisting of a sensor with O-ring or flange transducers depending on the application. | - Ideal flowmeter system for challenging applications  
- Standard version is delivered as a 2-track sensor with or without flanges, 4 tracks are available upon request  
- Available pipe materials is carbon or stainless steel on request  
- Easy exchange of integrated transducers without the need for downtime or process shutdown  
- In addition to the standard outputs, it also offers communication e.g. HART or PROFIBUS PA | Flow measurement of e.g. oil, condensate, cold, hot, demineralized- and feed water. | More information: [www.siemens.com/fussono3100](http://www.siemens.com/fussono3100) |
| SITRANS FUS SONOKIT | A simple and accurate alternative to traditional flowmeters. It is a transit time based ultrasonic flowmeter for retrofitting on existing pipelines. | - SITRANS F US SONOKIT has in-line transducers which assure superior accuracy and performance  
- Takes complexity out of retrofitting  
- Cost-effective and accurate solution, containing all the necessary components  
- Very robust as it can be buried and withstands constant flooding  
- Minimum maintenance due to the solid construction and no moving parts | Water intake, retrofit for water / oil applications, district heating. | More information: [www.siemens.com/fussonokit](http://www.siemens.com/fussonokit) |
| SITRANS FUE380 | Operates as part of a complete heat meter system. The 2-track flowmeter comes as battery or mains-powered and is approved to EN 1434, OIML R75 and MID class 2. | - Flexibility to customize your perfect flowmeter solution  
- Designed to provide accurate high-resolution energy measurement  
- Provides uncompromising performance for high-volume, water-based applications  
- Approved according to the MID directive and is designed and approved for custody transfer  
- Custody transfer sealed to ensure total data security | Measure water flow in district heating plants, local networks, boiler stations, substations, chiller plants and other general water applications. | More information: [www.siemens.com/fue380](http://www.siemens.com/fue380) |
| SITRANS FUS1010 Clamp-on | The most versatile clamp-on ultrasonic flow display transmitter available. | - Transit time and doppler makes it a versatile flowmeter  
- Suitable for a wide range of operating conditions and even liquids with high aerations or suspended solids  
- Easy installation and minimal maintenance  
- Wide turndown ratio  
- Choice of single channel or dual channel / dual path, with doppler capability. Four channel / four path optional  
- Optional four channels allow measurement of four independent pipes at the same time, reducing overall ownership costs | Chilled water, hot water, condenser water condensate, domestic water, fuel oil, verification. | More information: [www.siemens.com/fus1010](http://www.siemens.com/fus1010) |
| SITRANS FUE950 | The most versatile clamp-on ultrasonic flow display transmitter available. | - Has been developed for the combination with SITRANS FUS380 / FUE380 and alternatively MAG 5000 / 6000 or FST020  
- MID directive approval for custody transfer for water energy metering  
- Suitable for 2- and 4-wire temperature sensor connection  
- Delivered with heat-/cooling-approved PT300 sensor set (incl. sensor pockets)  
- Optical M-Bus data reading in accordance with EN 1434  
- Instantaneous values for energy and volume flow  
- Flexible input / output option modules | Used in combination with a flowmeter in applications like: heatmetering, chilled water applications or combined cooling / heating applications. | More information: [www.siemens.com/fue950](http://www.siemens.com/fue950) |
<table>
<thead>
<tr>
<th>Process protection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coriolis</td>
</tr>
<tr>
<td>SITRANS FC430</td>
</tr>
</tbody>
</table>

**Brief description**

- **Flowmeter system with compact design and excellent performance for accurate and multi-functional measurements as mass and volumetric flow, density, temperature on liquids as well as gases.**

- **Vortex flowmeter providing accurate volumetric and mass flow measurement of steam, gases and liquids as an all-in-one solution with integrated temperature and pressure compensation.**

- **Differential pressure measurement with an orifice plate is a universal flow measurement for liquids, gases and vapors. Differential pressure flowmeter always provide accurate results even with large bores, high temperature and extreme pressure.**

- **Motion failure alarm controller and probe, highly sensitive single setpoint motion sensor system.**

**Features and benefits**

- **Offers high accuracy over a wide range of flow rates.**
- **Multi-parameter measurement enables simultaneous monitoring of density leading to higher chemical dosing quality.**
- **Coriolis technology enables measurement of non-conducting liquids.**
- **Validated and configured for SIL 2 or SIL 3 operation as standard.**
- **Thanks to its outstanding flexibility, it can be installed practically anywhere and if required, small spaces can accommodate more than one device.**

- **Maintenance-free due to fully welded sensor construction with high corrosion, pressure and temperature resistance.**
- **Pressure, temperature and flow can be read at a single point with no extra equipment, installation or cabling costs.**
- **Saves downtime because of isolation valve, which makes an exchange of pressure sensor possible without interrupting the process.**
- **Orifice / differential pressure flowmeters are very robust and can be used in a wide range of nominal diameters.**
- **Suitable for wide ranges of temperature and pressure.**
- **No calibration required as the process is standardized.**
- **The electronics required in addition can be used over a long distance from the measuring location.**
- **Differential pressure measurement is well known and has a large installed base.**
- **Designed specifically for the handling of raw materials.**
- **100 mm sensing range allows detection on machinery with poor tolerances such as bucket elevators.**
- **The sensor is capable of penetrating stainless steel and detecting a ferrous target behind, which is particularly suited to screw conveyor applications.**
- **Rugged, low maintenance suitable for tough environments.**
- **Non-contacting design eliminates the need for lubricating, cleaning and part replacement.**
- **It alarms to minimize spillage, prevent extensive damage or even fire caused by belt slippage at the head pulley and warn against conveyor malfunction.**

**Typical applications**

- **Heating fuel, limestone suspension, condensate treatment chemical addition, fuel oils with type discernment from density.**
- **Steam, condensate, demineralized water, measurement of consumption in compressed air.**
- **Water steam cycle, high pressure / high temperature applications, combustion air, fuel gas.**
- **Motion sensing on tail pulleys, driven pulleys, motor shaft sensing, screw conveyor flights, bucket elevators.**
- **Motion sensing on tail pulleys, driven pulleys, motor shaft sensing, screw conveyor flights, bucket elevators.**

| Acoustic sensor used for solids flow detection. | • Detects and reacts instantly to changes in solids flow to warn of blockages, product absence, or equipment failure such as burst filter bags  
• Operating with a SITRANS CU02 control unit, the system detects conditions of high flow, low flow or no flow  
• Designed to be mounted on the outside of the pipe without contact to the material | Burst filter bag detection, detection of blockages in pneumatic conveyor systems, ensure that mechanical conveying systems maintain their set speed. |
| **Series of digital pressure transmitters for measuring gauge pressure, absolute pressure, differential pressure, flow and level.** | • Remote mounting capability allows isolation from high temperatures and vibration sources  
• Local display and local programming with push buttons, accessible without opening the enclosure  
• Robust design, suitable for installations in the cement industry  
• Advanced communications and predictive maintenance functions enable optimization of maintenance cycles  
• High accuracy and turndown of 1:100 | Pressure measurement is found nearly in every part of power plant, e.g. boiler, water steam cycle, turbine, auxiliaries. |
| **The SITRANS P500 meets the highest expectations for measuring accuracy, ruggedness, and user-friendliness.** | • High measuring accuracy  
• Very fast response time  
• Extremely good long-term stability  
• High reliability even under extreme chemical and mechanical loads  
• For aggressive and non-aggressive gases, vapors and liquids  
• Extensive diagnosis and simulation functions which can be used both on site as well as via HART  
• Optional separate replacement of measuring cell and electronics without recalibration | Applications where highest accuracy and very fast response time is required, e.g. turbines. |
| **WirelessHART pressure transmitter that provides all measured process values as well as diagnostic information, parameters, and functions via radio.** | • Supports the WirelessHART standard for a flexible temperature measurement  
• Enables cost savings on wiring for locations with difficult installation conditions, like in remote areas of plants, and on moving or rotating equipment  
• Device meets IP65 degree of protection  
• Powered by an internal battery and designed for ultralow power consumption | To communicate pressure measurement data:  
• from a remote location like the quarry  
• from a moving machine |
| **Designed to support all common RTDs, thermocouples, resistance and Millivolt sensors. Setup is quick and easy with the transmitter modem and SIPROM T software or SIMATIC PDM.** | • Measures temperature with a linear output signal  
• High accuracy across entire ambient temperature range  
• Alarm signal for sensor break or short circuit  
• Saves expensive compensation cables with the internal reference junction  
• Galvanic insulation for accuracy and safety in thermocouple applications  
• Single- or dual-point trim  
• Custom characteristic curve for application of non-standard sensors  
• Rugged design, fully potted electronics | Temperature measurement is found nearly in every part of power plant, e.g. boiler, water steam cycle, turbine, auxiliaries. |

### Brief description

**SITRANS TS**

The industry-grade temperature sensor supports a wide range of measuring goals from basic applications to solutions in harsh environment.

**SITRANS TF280**

WirelessHART temperature transmitter that provides all measured process values as well as diagnostic information, parameters, and functions via radio.

**SIPART PS2**

Positioner for linear and part-turn actuators. Optional remote-mounted non-contacting sensor (NCS-Option) can keep the positioner away from the harsh environment.

**ULTRAMAT 23**

Up to four gas components can be measured simultaneously with the ULTRAMAT 23 gas analyzer: up to three infrared-active gases such as CO, CO₂, NO, SO₂, CH₄, additionally O₂ with an electrochemical sensor or paramagnetic oxygen cell.

**CALOMAT 6**

Primarily used for quantitative determination of components (e.g. H₂, He, CO₂ etc.) in binary or quasi-binary non-corrosive gas mixtures.

### Features and benefits

**SITRANS TS**

- The modular system allows exchangeability and variety, extension and connection head with optional integrated transmitter or display
- Available as RTD (Pt100) and thermo-couple
- International approvals for IEC-Ex and ATEX for Ex d, Ex i and Ex n in gas and dust
- Optional transmitter and local display

**SITRANS TF280**

- Supports the WirelessHART standard for a flexible temperature measurement
- Enables cost savings on wiring for locations with difficult installation conditions, like for mounting in remote areas of plants
- Housing meets IP65 degree of protection
- Very high security level for wireless data transmission
- Powered by an internal battery and is designed for ultralow power consumption

**SIPART PS2**

- The industry benchmark for linear and rotary valves, double- and single-acting actuators
- Advanced diagnostics including predictive maintenance allow operators to plan in advance of failures
- Extremely low air consumption
- Full range of communication via HART, PROFIBUS PA or FOUNDATION fieldbus

**ULTRAMAT 23**

- AUTOCAL with ambient air (dependent on the measured component):
  - Highly cost-effective because calibration gases are not required
  - High selectivity thanks to multi-layer detectors, e.g. low cross-sensitivity to water vapor
  - Sample chambers can be cleaned if required on site
  - Cost savings due to reuse after contamination
  - Preventive maintenance; help for service and maintenance personnel, cost savings

**CALOMAT 6**

- Small T90 time due to micromechanical-produced Si sensor
- Electronics and analyzer part: gas-tight separation, purgeable
- IP65, long service life even in harsh environments
- EEx(p) for ATEX Zone 2 and FM/CSA Class I Div 2
- Monitoring equipment for hydrogen-cooled turbo-alternators:
  - 0 to 100 % CO₂/Ar in air
  - 0 to 100 % H₂ in CO₂/Ar
  - 80 to 100 % H₂ in air

### Typical applications

**Temperature measurement** is found nearly in every part of power plant, e.g. boiler, water steam cycle, turbine, auxiliaries.

**To communicate temperature measurement data:**
- from a remote location like the quarry
- from a moving machine

**Control of pneumatic actuators,** e.g. condensate control valve, cooling systems.

**Emission monitoring**

**Turbo Generator**

**Brief description**
- The fast and non-contact measurement of gas concentrations directly in the process is the domain of in-situ diode laser gas analyzers. The robust and reliable LDS 6 and SITRANS SL in-situ gas analyzer can measure gases even under extreme conditions.
- SITRANS CV / MicroSAM provides all information to the natural gas quality and its physical properties such as calorific value and density, which are required for manifold applications in the energy industry.
- Standardized complete multi-component emission monitoring system for combustion plants which covers all requirements associated with sampling, sample preparation, and gas analysis in accordance to EU and EPA guidelines.
- Universal remote display for level, flow, pressure, temperature, weighing, and other process instruments.
- Remote data manager providing remote monitoring through data logging, web access, and alarming for instrumentation.

| Features and benefits |  |
|-----------------------|  |
| LDS 6 / SITRANS SL | SITRANS CV / MicroSAM | Gasmet CEMS | SITRANS RD100 / 200 | SITRANS RD500 |
| - Little installation effort | - Fast analysis through innovative MEMS technology | - Simultaneous multicomponent analysis of up to 16 gas components | - SITRANS RD100 is NEMA 4X / IP67 enclosed for indoor and outdoor applications, in hot or cold environments, and in safe or hazardous areas | - RD500 supports report and alarm events via e-mail, SMS, and FTP transfer |
| - Minimum maintenance requirements | - Precision through valveless live injection | - Up to 3 analyzers (FTIR, O₂, and FID) may be combined in one set | - Web server provides worldwide access to instrument data log and RD500 configuration and setup |
| - Extremely rugged design | - High separation performance through narrow-bore capillary columns | - QAL1 certified emission monitoring in accordance to EU and EPA guidelines |  |
| - Long-term stability through built-in, maintenance-free reference gas cell, field calibration is unnecessary | - Low detection limits through powerful detectors |  |  |
| - Real-time measurements | - High linearity over the entire measuring range saves expensive calibration gases |  |  |
|  | - Can be mounted directly at the sample extraction point; with its extremely robust design installation requirements are minimal |  |  |
|  | - Low operation costs through modular design and low power consumption |  |  |

### Features and benefits

- Available as point-to-point or as an integrated part of control system
- Allows the user to configure field devices by different manufacturers using a single user interface and access the instruments on every level of the automation hierarchy
- Process device data can be easily set, changed, checked for plausibility, managed and simulated
- Monitors selected process values, alarms and status signals of devices online
- Allows backup parameters and advanced diagnostics
- HART/4…20 mA wireless signal transfer
- No extra wiring costs with loop power supply
- Up to eight devices connected in multi-drop mode
- Configurable with standard tools support EDD – e.g. SIMATIC PDM, HART handheld communicator
- Good and simple retrofitting or extension solution for wired devices
- Can be used in hazardous areas
- Users can utilize all diagnostic information at the maintenance station without the risk of impaired operation
- Connects up to 100 WirelessHART devices
- Approved for operation in hazardous areas in Zone 2
- Open TCP/IP communication and Modbus TCP via the Ethernet interface
- Integrated Web interface allows simple configuration of LINK and network as well as monitoring
- State-of-the-art security for wireless network and data communication
- Standardized for PROFINET/Industrial Ethernet
- Industrial Ethernet layer 2 and layer 3 switches
- Industrial Ethernet media converters
- IEC 62439-3 for redundant always-on communications and zero second network recovery times
- Industrial Security modules
- Industrial Wireless LAN according IEEE 802.11n for high performance up to 450 MBit/sec (gross data rates)
- Industrial Wireless LAN controller for enhanced operation of IWLAN networks
- Industrial 2G/3G modems and routers
- SINEMA Server network management
- Cables & plugs
- Rugged switches and routers up to 10 Gbit/sec
- Serial Server devices for legacy equipment
- Ethernet over VDSL portfolio
- 4G broadband wireless technology
- NERC CIP security compliance
- IEC 61850 and IEEE 1613 certified
- IEEE 1588 high-precise time synchronization for IEC 61850-9-2 process bus requirements
- IEC 62439-3 (PRP) for redundant always-on communications and zero second network recovery times
- Low latency for GOOSE messages

### Typical applications

- Configuration, parameterization, commissioning, diagnostics and maintenance of field devices and field components.
- Integration of field devices into a WirelessHART network.
- Connecting a WirelessHART network to Industrial Ethernet.
- Connecting the control level with the operations level based on Industrial Ethernet.
- Substations, transformer stations, in recloser status monitoring and all kinds of protection and control installations.

Seamlessly integrated solutions from the management level to the field level with Siemens Power Plant Automation (SPPA)

Siemens is the global market and technology leader for all automation tasks in every type of power plant – with its SPPA-T3000 control system.

SPPA-T3000 is the fourth generation control system that has been developed to provide a competitive advantage by boosting profitability, reliability and ease of use. Major benefits of SPPA-T3000 are:

- Easy handling to support operators at mastering controls
- High-performance data distribution – the right information anytime, anywhere
- Easy to engineer – built for simultaneous online modification HMI and automatic functions

The SPPA-T3000 platform integrates not only the power generation process but all parts of the company – seamlessly: from instrumentation at the field level to IT landscapes at the management level. The result is a perfectly coordinated overall solution that enables lowest life-cycle costs.
Siemens' SPPA-T3000 Control System is one of the world’s most powerful and future-safe power plant control systems. It is a perfect fit for all types of power plants and ensures seamless integration of all solutions from electrical and IT systems to process optimization, diagnostics and instrumentation of a single plant or even an entire fleet.
The information provided in this brochure contains merely general descriptions or characteristics of performance which in case of actual use do not always apply as described or which may change as a result of further development of the products. An obligation to provide the respective characteristics shall only exist if expressly agreed in the terms of contract.
